

DTM2015 Manipulation Tester

is used to check digital tachographs for correct installation and manipulation attempts. It can be used to check:

the vehicle unit

installation connecting
the system components
in the vehicle

the motion sensor

It is possible to check the latest smart tachographs, including a short range wireless communication using DSRC technology (Dedicated Short Range Communication).

The DSRC transceiver can be mounted on a vehicle to read tachographs in motion or on a tripod set on the road.
